Are you a parent? Here's how Learning Banyan helps your child →

HOW ONE IDEA GROWS

Grade 5	$\frac{3}{4}$ of $24 = ?$ Fractions of a quantity
Grade 7	$3x + 5 = 20$ Linear equations
Grade 9	$x^2 - 5x + 6 = 0$ Quadratics, built on both

Gaps in the early
steps show up later.
We help students
build the roots first.

20 years	10K+	Grades 5–10	24/7
of face-to-face maths teaching	practice questions	middle to senior years	self-paced access

ABOUT US

We've seen the same story for two decades.

Ask most children about maths in Grade 4 and they'll tell you it's their favourite subject. Homework is quick, answers are clear, and top marks come easily.

Then something changes. In the middle years, new ideas take more thinking and more time. By the senior years, the pace picks up and a single question can test several concepts at once. Even A* students start to feel overwhelmed.

After twenty years of teaching maths face to face, we've learned it isn't about ability. It's about foundations.

A banyan tree stands strong for generations because of its deep, spreading roots. Maths works the same way. Learning Banyan brings our classroom experience online, so students can build those roots early and walk into the senior years ready.

We're starting with maths, the subject we know best, with more subjects to follow.

WHAT DRIVES US

Our Mission

To build strong foundations through daily, focused practice, so challenging subjects feel manageable, not overwhelming.

Our Vision

Students who stay confident in their learning at every stage of school, because their roots were built early.

WHAT MAKES US DIFFERENT

Practice that's chosen, not random.

Hand-picked by teachers

Every question is chosen from past test papers and trusted textbooks across multiple curricula. No more hunting for the right practice.

Built for the years that matter

Grades 5–10 are when the foundation is set. We focus on exactly those years.

A head start on senior maths

Students practise the thinking skills they'll need for senior-school maths, before they need them.

Online, at your own pace

Practise from home, whenever it suits your family's schedule.

EVERYTHING YOU NEED TO PRACTISE

Pick a tool and start.

Courses, practice exams, past papers and help when you're stuck, organised for focused study.

Courses & topics

Structured courses by topic. Build understanding step by step.

Explore courses →

Practice exams

Build your own exam, sit it under timed conditions, then review your answers with worked solutions.

OUR APPROACH

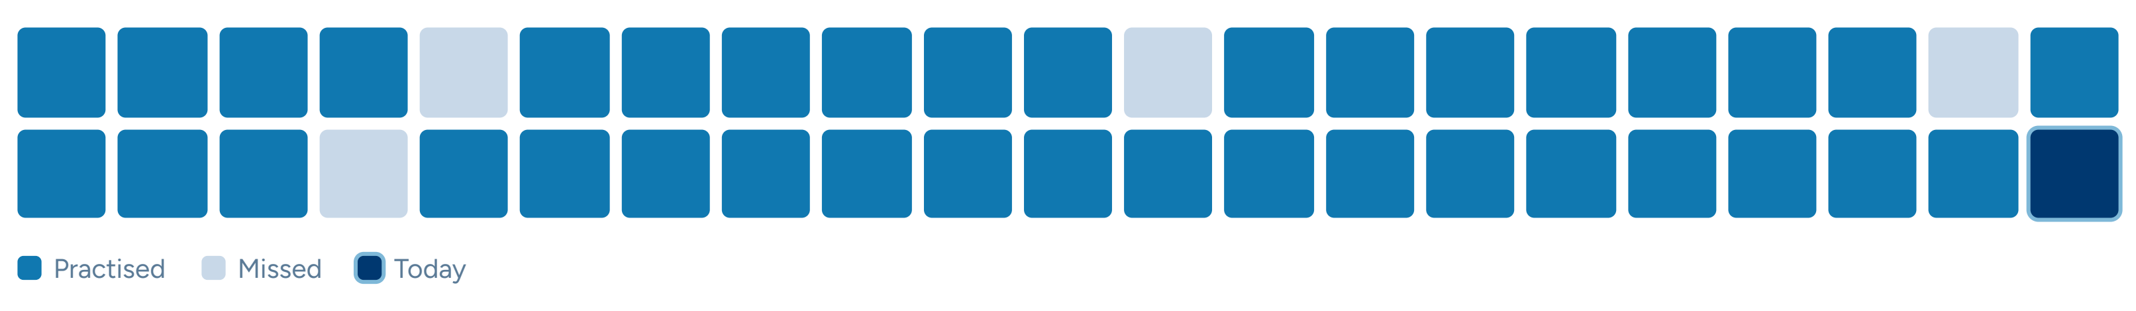
Maths is a marathon, not a sprint.

No one runs a marathon by training once a week. Progress comes from showing up a little every day and finishing what you start.

That's how Learning Banyan works. Short, steady daily practice builds skills that last. Refresh a concept, practise topic questions during the week, then try a full paper at the weekend.

Example: six weeks of daily practice

Current streak 16 days



Run at your own pace. Just show up every day.

TIPS FOR SUCCESS

Show full working
Clear steps earn marks even when the final answer slips.

Link multi-part questions
Later parts often reuse values or ideas from earlier parts.

Simplify early
Neat algebra makes the next step easier and cuts careless errors.

Mix practice modes
Short topic drills during the week, full papers at the weekend.

FOR PARENTS

You've probably seen it happen.

A child who loved maths in primary school starts to struggle as the work gets harder. It isn't a lack of ability. It's gaps in the foundation.

Learning Banyan helps close those gaps early. You don't need to plan lessons or find materials. Just encourage your child to show up every day, and we'll take care of the rest.

Sign up your child

Who is it for?
Students in Grades 5–10 who want a strong base for senior-school maths.

How is it different from free worksheets?
Questions are hand-picked from past papers and trusted textbooks and set in a sensible order, so your child isn't practising at random.

Who is behind it?
Maths teachers with twenty years of face-to-face tutoring experience, now bringing that experience online.

How much time does it take?
A short session each day. Steady practice matters more than long hours.

QUESTIONS

Frequently asked questions

Can't find your answer? Ask on the Question Forum or contact us.

What can I do on Learning Banyan? -
You can explore courses, practise with past papers, build custom exams and question lists, view study resources, and ask about anything you're stuck on in the Question Forum.

Do I need an account for practice exams? -
Yes. A free account lets you build exams, save your results and track what still needs work.

How should I revise effectively? -
Refresh the concept first, then practise topic questions, then sit full papers under timed conditions. A little every day beats a long session once a week.

Where do I ask questions if I am stuck? -
Post on the Question Forum's topic boards, where mentors and other students share solutions. Our resources and blogs also explain key concepts.
